SECJ 4383 – Software Constructions Lab Exercise

Lab Exercise 1c – DevOps Continous Testing Lab

(This lab exercise is not self-explanatory. Further explanation will be given by the instructor during the lab session)

Devops Lab Instruction (Detailed Instructions in the video)

Part 1: Continuous Testing (CT)

1. Create test class in Java project
2. Go to Jenkins > Jobs > Configuration > Add testing pipeline script
3. Commit and push changes in github to observe continuous testing in jenkins
4. Observe test results

Part 2: Integration with Sonarqube

1. Go to sonarcloud cloud and signup using github https://www.sonarsource.com/products/sonarcloud/signup/
2. Login to sonarcloud using github and create an organization manually (Choose free plan)
3. Go to jenkins and install sonarqube related plugins
4. Go to sonarcloud and generate tokens to link jenkins and sonarcloud
5. Add sonarcloud credentials in jenkins
6. Go to jenkins jobs > Configure > add sonarqube analysis pipeline
7. Go to visual studio code or any IDE to create an empty ‘report-task.txt’ file
8. Commit and push changes to github
9. Observe continuous testing process in Jenkins and the results analysis in sonarcloud dashboard
